How Light Therapy Masks Improve Skin

Light therapy masks use different colors of light that improve skin cells in specific ways:

- Red Light (600-700 nanometers)** penetrates deeper, stimulating collagen production and improving blood circulation, which helps skin heal.
- Blue Light (400-500 nanometers)** targets the surface to kill acne-causing bacteria.
- Green Light (500-570 nanometers)** reduces fine lines, nourishes aging skin, and accelerates the wound healing process.
- Infrared (850 nanometers):** Reduces wrinkles and accelerates wound healing.

Skin cells have mitochondria that absorb light energy, boosting metabolism and repair.

Some wavelengths also reduce inflammation, benefiting sensitive skin. Overall, light therapy can effectively address various skin issues and enhance skin health.

ARTEMIS BLUSH

LED Light Therapy Mask

Provides comprehensive skin care, gently conforms to your facial features for an ergonomic fit, with an adjustable head strap fastener, eye cups, and a corded remote to adjust light, intensity, and treatment time

4 Light Modes

Choose between Red (R), Blue (B), Green (G) and Infrared (NIR) light modes based on your skincare needs.

- R + NIR:** Penetrates deep into the dermis to promote collagen production, and effectively diminish dynamic/static wrinkles such as forehead lines, crow's feet, and nasolabial folds.
- B + NIR:** Kills bacteria and suppresses acne, while activating cellular repair mechanisms. Combined use can effectively improve mild to moderate acne, reduce inflammation, and accelerate skin healing.
- G + NIR:** Helps to even skin tone and soothe inflammation, effectively addressing issues of uneven complexion and redness. When combined with near-infrared light (NIR), it further promotes cellular repair mechanisms, enhancing overall skin health.
- R + G + B + NIR:** A multidimensional and versatile rejuvenation solution. Ideal for individuals with complex skin conditions, dull and uneven skin tone, as well as those struggling with both wrinkles and acne.clear, refined skin

Skin-Friendly & Hygenic

Made from flexible, skin-friendly silicone that easily conforms to the shape of your face, minimizing irritation and making it easy to clean while providing the perfect fit.

Comprehensive Coverage

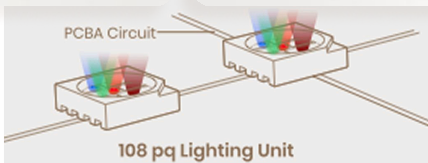

432 high-density LED beads and an extended design that also covers your chin to provide a uniform exposure that effectively targets your face and area below the chin that traditional masks often miss.

Target

Professional-Quality At-Home Skin Care

Experience professional-level light therapy at home without the need for appointments or waiting, saving you both time and money. Ideal for beauty-conscious individuals seeking effective anti-ageing, firming and brightening solutions.

Specifications | Model E100B-1

Input: 5V DC 1A	Timer: 10/20/30min
Battery Voltage: DC 3.7V	Charging Time: 2.5H
Battery Capacity: 2000 mAh 7.4Wh	Operating Time: >45min

In the box

LED Silicone Mask	USB Charging Cable
Connecting Line	Controller
Eye Cups	Adjustable Head Strap
